GOVERNMENT OF KARNATAKA

**VITAL STATISTICS OF KARNATAKA
BASED ON THE
CIVIL REGISTRATION SYSTEM**

**SPECIAL REPORT
2001 - 2008**

**OFFICE OF THE CHIEF REGISTRAR OF BIRTHS & DEATHS
AND
DIRECTORATE OF ECONOMICS & STATISTICS
BANGALORE**

P R E F A C E

This special issue of the Report on ‘Vital Statistics of Karnataka based on the Civil Registration System’ for the period 2001-2008 provides a brief overview of the working of the Civil Registration System (CRS) in the State and presents a compilation of data on registered births, deaths and infant deaths with rural-urban and sex-wise break-up and sex ratio at birth based on Civil Registration Records. Ideally an Annual Report on Vital Statistics containing more detailed information should have been brought out. However, due to voluminous data being presented in Annual Reports of the different years of the State, an endeavour has been made to consolidate the key information for the period 2001-2008 and a consolidated time series report brought out for the convenience of users.

The publication incorporates a brief review of the Civil Registration System and contains a summary analysis of data on registered births, deaths, infant deaths and sex ratio at birth at District level. Apart from this, the report incorporates the main tables which provide District-wise data on registered births, deaths and infant deaths with rural – urban and sex-wise break-up and sex ratio at birth.

The data source for the report is basically the statutory Annual Statistical Report prepared in the Chief Registrar’s Office with the co-operation extended by the registration functionaries and concerned authorities at various levels. I take this opportunity to express my sincere gratitude to all of them.

The report has been prepared in the Civil Registration section of this Directorate. Suggestions are most welcome for the improvement of this report.

Bangalore.

Civil Registration System – An overview	2-13
A Brief Analysis of Data on registered Births, Deaths and Infant Deaths	
STATEMENTS	
Statement-1: Number of Births and Deaths Registered in Karnataka - 1981-2008	3
Statement-2: District-wise number of Births Registered -1996 -2008	6
Statement-3: District-wise number of Deaths Registered – 1996-2008	7
Statement-4: District-wise Number of Infant Deaths Registered – 1996-2008	8
Statement-5: Districts classified by their level of registration in 2008	10
Statement-6: Crude Birth and Death Rates based on CRS and SRS and Level of Registration of Births and Deaths – 1981 - 2008	11
Statement-7: Infant Mortality Rates (IMR) based on CRS as percentage of that from SRS, 2001-2008	12
Statement-8: Sex-ratio at Birth on Registered Births, 2001-2008	13
CHARTS	
Chart - 1 : Number of Registered Births, 1981-2008	3
Chart - 2 : Number of Registered Deaths, 1981-2008	4
Chart – 3 : Number of Registered Births classified by regions, 1996-2008	4-5
Chart – 4 : Number of Registered Deaths classified by regions, 1996-2008	5
Chart – 5 : Level of Registration of Births and Deaths (Karnataka), 2001-2008	9
DETAILED TABLES	
Table – 1 : Number of Live Births Registered by Sex and Residence, 2001-2008	14-21
Table – 2 : Number of Deaths Registered by Sex and Residence, 2001-2008	22-29
Table – 3 : Number of Infant Deaths Registered by Sex and Residence, 2001-2008	30-37
Table – 4 : Crude Birth Rate based on CRS, 2001-2008	38
Table – 5 : Crude Death Rate based on CRS, 2001-2008	39
Table – 6 : Infant Mortality Rate based on CRS, 2001-2008	40
Table – 7 : District-wise level of Birth Registration, 2001-2008	41
Table – 8 : District-wise level of Death Registration, 2001-2008	42

Civil Registration System – An overview

A complete and upto date Vital Statistical System is needed to yield reliable data on vital events as these data are a pre-requisite for socio-economic planning and also to evaluate the effective implementation of various programmes. In particular they are the cornerstone of Public Health Systems today.

The main sources for data on vital events in the country as well as below national level are Civil Registration System (CRS), Sample Registration System (SRS) and Population Census. The population census provides information on population and its other characteristics. The census being a decennial exercise does not provide the measure of population change from year to year. The measures of fertility and mortality derived from the census are centered on the mid-point of the decade and as such do not provide annual change. Of the other two sources of vital statistics for getting the vital rates on regular basis, the SRS has been designed to provide reliable estimates at National and State Level. Due to requirement of large sample size and variety of resultant factors such as controlling of non-sampling errors etc., the possibility of getting robust estimates of vital rates at District and Sub-district level on annual basis through sample survey is not possible. Civil Registration System (CRS) is thus the only source for providing vital rates at district and sub-district level. Rather a complete CRS can provide these rates at all administrative levels.

The CRS may be defined as a continuous permanent and compulsory recording of the occurrence and characteristics of vital events as derived in and as provided through a decree or regulation in accordance with the legal requirements of a country. In India, the CRS covers events of births and deaths only.

The registration records are serving twin objectives, primarily useful for their value as legal documents and secondarily as a source of vital statistics. Civil Registration as a source of vital statistics is relatively inexpensive, as the statistics generated from the registration records are the by-products of an essential administrative process. The registration records can also generate current and continuous statistics, which can be more accurate than any other method of data collection. However, the reliability of the statistics obtained through the registration system depends much on the completeness and promptness with which events are registered and the accuracy of the information in the registration records. The improvement in the system of registration of births and deaths is critically dependent on how much importance is attached to the data on births and deaths by the respective administrative units at different levels. Besides, the level of awareness among the public about the utility of birth / death certificate also plays a crucial role.

Registration of Births and Deaths

The registration of births and deaths is carried out under provisions of the Registration of Births and Deaths, 1969 (RBD Act, 1969) through out the country. The Karnataka Registration of Birth and Death Rules, 1970 (KRBD) were framed and issued by the Government Karnataka on 15th December, 1970 and were effective from 1st January 1971.

At present, in the state, the Directorate of Economics and Statistics supervises the Civil Registration work at State level. The Chief Registrar of Births and Deaths is the Chief executive authority for implementing the Act and Rules in the State, followed by the District

Registrars at the district level down to Registrar at the village level. Registration services are decentralised spreading across 30 districts with more than 29000 registration centres. The registration functionaries in the state are from the Revenue Department, Health Department, Women and Child Department and the Directorate of Economics and Statistics (DES).

In order to simplify and speed up the process of registration as also to bring an uniformity in birth and death registration formats, the registration system was revamped in the year 2000. Under the revamped system, the procedure for registration of births and deaths was also modified to some extent and the forms redesigned. Most of the tables to be part of the Annual Report of the Chief Registrars based on registration of births and deaths data under revamped system would be based on the information of place of usual residence of mother in case of births and place of usual residence of the deceased in case of deaths. The revamped system of Registration of Birth and Death is in force in Karnataka from 1st January 2000.

Statistical Reports

Registration of Births and Deaths is constantly generating statistical information at the local level. The information contained in the Reporting Forms is consolidated in the Chief Registrar's Office. Every Chief Registrar is required to submit an Annual Report on the working of the Act and a Statistical Report to the State Government by July and December respectively of the following year to which the report relates. The Chief Registrars are also required to send a copy of these reports to the Registrar General, India.

Based on the information available in the Reporting Forms the Annual Statistical Report has been prepared annually. Some tables of the report contains information for Districts with rural-urban and sex-wise break-up. Therefore, this special report has been prepared by compiling this information. Keeping in view the importance and use of the data on registered births and deaths, this report provides the District-wise registered births and deaths along with infant deaths with sex-wise and rural-urban break-up of registered events for the period 2001-08.

A Brief Analysis of Data on Registered Births, Deaths and Infant Deaths

Births and Deaths are the two most important vital events. The basic statistics on births and deaths registered have been used to generate vital rates and some other related important indicators and the summary results are presented in Statement 1 to 7. Statement-1 depicts the trends in registered births and deaths at the state level since 1981, whereas statements 2, 3 and 4 present the district-wise data on registered births, deaths and infant deaths respectively since 1996. The comparison of this data with SRS data brings out the coverage of CRS. However, while interpreting the comparison it should be borne in mind that the registration of births and deaths is carried out at the place of occurrence of the event whereas the vital rates based on SRS are generated based on place of usual residence of mothers / deceased (as the case may be) irrespective of the place of occurrence of events. It is also important to mention that the registration data, at present, is deficient not only in terms of non-registration of events but also with regard to non-reporting by the local registration units

to the District Registrar’s Office. A brief description and general findings based on these statements are given in the following paragraphs.

The number of births and deaths registered in the state for the years 1981 to 2008 are presented in Statement-1.

Statement 1 : Number of Births and Deaths Registered in Karnataka, 1981 – 2008.

Year	Births	Deaths	Year	Births	Deaths
1981	466387	150526	1995	996077	325279
1982	480337	150008	1996	1028112	336535
1983	406812	224115	1997	1031329	350264
1984	439892	132568	1998	1042256	374400
1985	484334	154186	1999	997649	346451
1986	564500	162700	2000	1009716	351736
1987	564015	154018	2001	1017224	365181
1988	641846	195787	2002	973653	355662
1989	693287	199766	2003	1001749	359661
1990	780496	209873	2004	988520	343644
1991	792291	240206	2005	1007868	364415
1992	827188	215666	2006	1046531	387604
1993	860421	257133	2007	1046424	381890
1994	886320	282180	2008	1082450	372062

Although the number of registered births and deaths has shown an overall increasing trend, however, in some intervening years with a fluctuating trend over these years. The number of registered births has increased from 4.6 lakhs in 1981 to 10.8 lakhs in 2008. Except for the years 1983, 1984, 1999, 2002 and 2004, the increase has been gradual in the remaining years. The decline during these years was on account of non-availability of information on registration of vital events in most of the districts during the year. Similarly, the number of registered deaths has increased from 1.5 lakhs in 1981 to 3.72 lakhs in 2008. Chart 1 and 2 further highlights the pattern in number of registered births and deaths from 1981 to 2008.

Chart 1 : Number of Registered Births, 1981 -2008.

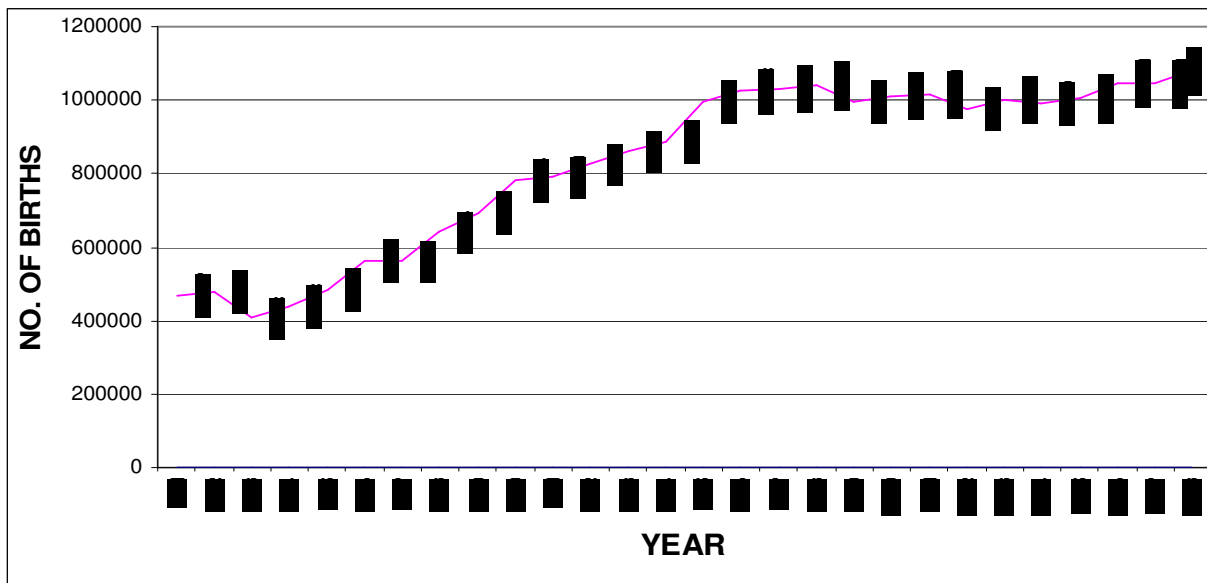

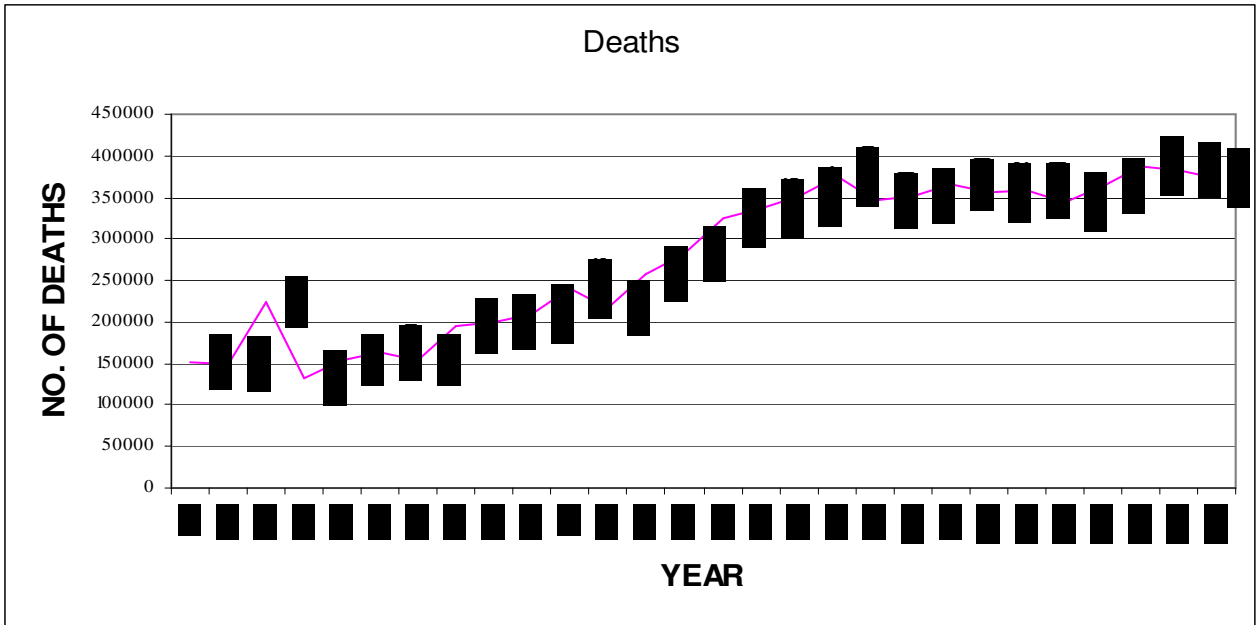

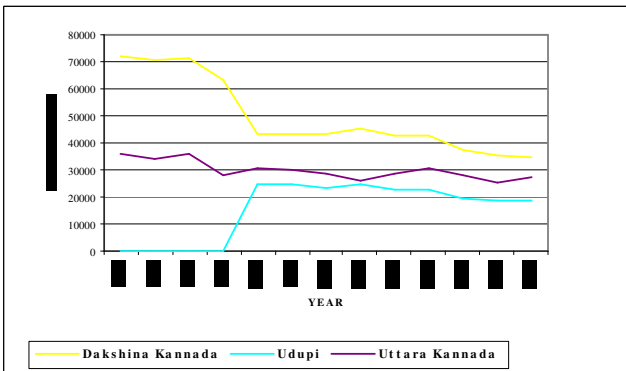

Chart 2 : Number of Registered Deaths, 1981 – 2008.

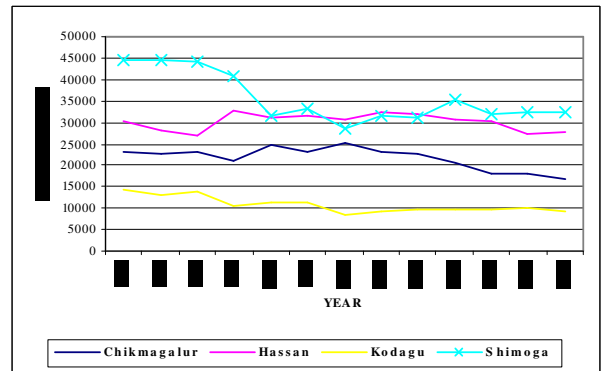

The number of registered births, deaths and infant deaths for districts for the period from 1996 to 2008 is presented in Statement 2, 3 and 4 respectively. Graphical presentation of trend in the number of registered births and deaths for a group of districts as per NSS regions is shown in Chart-3 and 4 respectively.

Chart 3 : Number of Registered Births for a group of districts as per NSS regions, 1996-2008

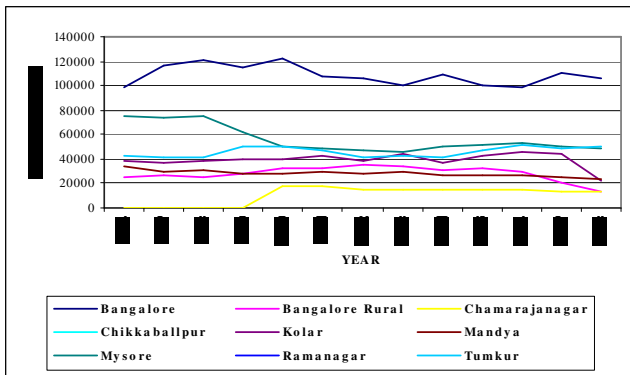

(1) Coastal & Ghats

(2) Inland Eastern

(3) Inland Southern

(4) Inland Northern

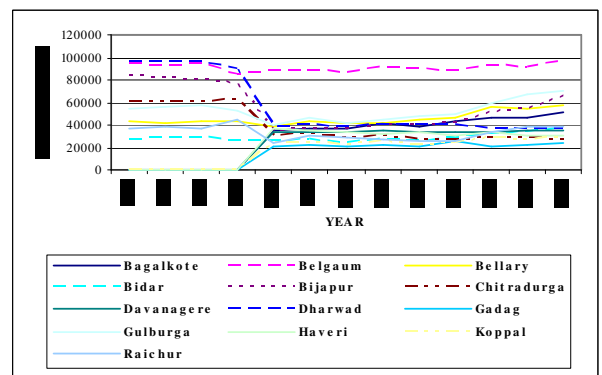

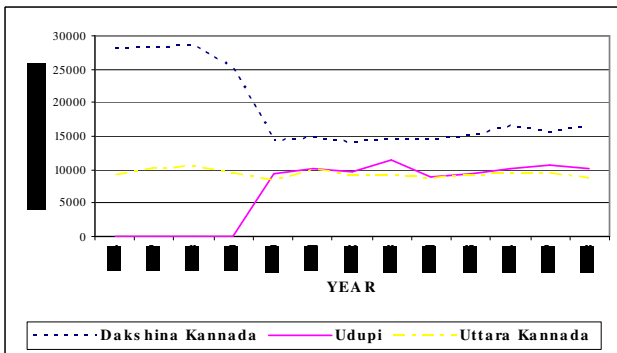

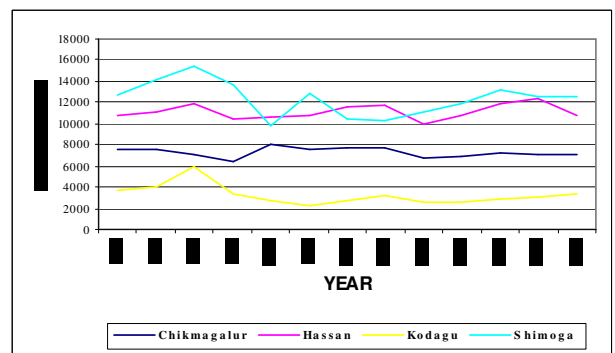

Chart 4 : Number of Registered Deaths for a group of districts as per NSS region, 1996-2008

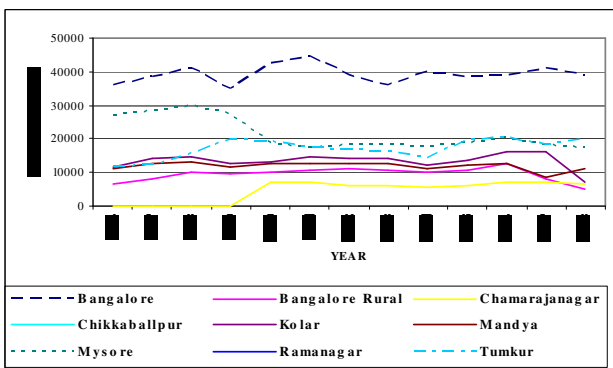

(1) Coastal & Ghats

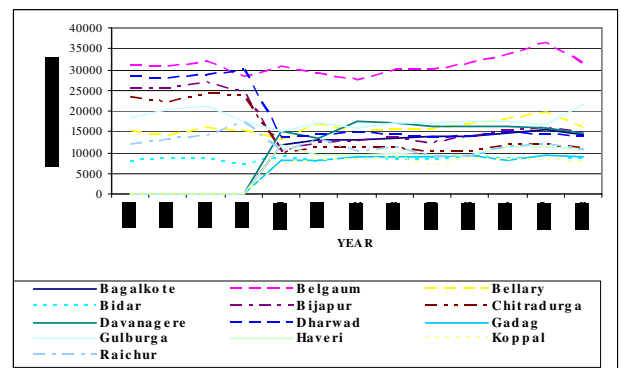

(2) Inland Eastern

(3) Inland Southern

(4) Inland Northern

Level of Registration of births / deaths

The level of registration, defined as the percentage of registered births / deaths to the estimated births / deaths, determines the performance level of a state so far as the efficacy of Civil Registration System is concerned. For the purpose, the estimated total number of events (births / deaths) as revealed from SRS rates is used in the absence of reliable estimates from any other source. The level of registration so calculated is very high either due to the lower estimates of vital events than the actual and / or due to the fact that SRS estimates of vital events are registered at the place of occurrence irrespective of the place of residence.

The levels of registration of births and deaths at state and district levels thus estimated for the period 2001 to 2008 are presented on Table-7 and Table-8 respectively. The level of registration of births has increased from 86.3 per cent in 2001 to 94.6 per cent in 2008. The level of registration of deaths has decreased from 90.5 per cent to 87.0 per cent during the corresponding year. Chart 5 highlights the level of registration of births and deaths from 2001 to 2008.

Chart – 5 : Level of Registration of Births and Deaths (Karnataka), 2001-2008

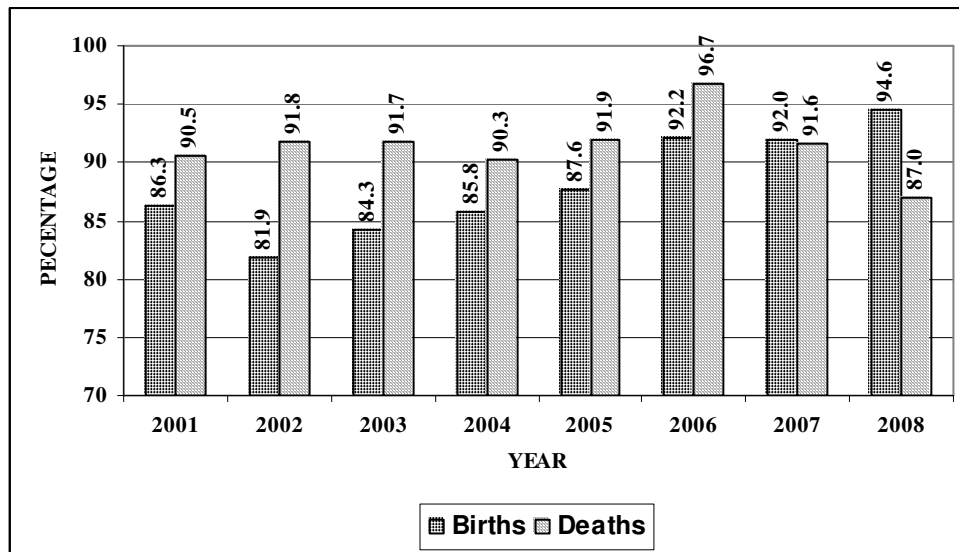

Table-7 reveals that the districts are functioning at different levels of registration efficiency. The level registration of births in the state is highly uneven with very high as well as very low registration in both rural and urban areas. In 2008, 11 districts have attained the cent percent level of registration of births under review.

Table 8 shows that level of registration of deaths in the state is also highly uneven with very high as well as very low registration in both rural and urban areas. In 2008, only 5 districts recording cent percent of deaths followed 6 districts reporting more than 90 per cent registration of deaths under review.

Statement 5 depicts the distribution of districts by their level of registration of births and deaths. The level of registration is achieved more than cent percent in those districts where a number of events may be occurring to the outsiders (persons belonging to the neighbouring border areas) who visit their places to avail of the better medical facilities. The districts have been categorised into 4 groups as per their level of registration of births and deaths in 2008.

Statement – 5 : Districts classified by their level of registration in 2008

Level of Registration	Births	Deaths
Above 90	Bagalkote, Belgaum, Bellary, Bidar, Bijapur, D.Kannada, Dharwad, Gadag, Gulbarga, Hassan, Kodagu, Koppal, Mysore, Raichur, Shimoga, Tumkur, Udupi & Uttara Kannada	Bagalkote, Bellary, Bijapur, D.Kannada, Davanagere, Dharwad, Gadag and Udupi.
80-90	Chikkaballapur, Chikmagalur, Davanagere, Haveri and Kolar	Bangalore, Belgaum, Chamarajanagar, Chitradurga, Haveri, Mysore, Shimoga, Tumkur and U.Kannada.
50-80	Bangalore, Bangalore Rural, Chamarajanagar, Chitradurga, Mandya and Ramanagar	Bidar, Chikkaballapur, Chikmagalur, Gulbarga, Hassan, Kodagu, Koppal, Mandya, Raichur and Ramanagar.
Below 50	--	Bangalore Rural and Kolar

It is observed that while the level of registration of births is above 90 per cent in as many as 18 districts in 2008, only districts could achieve that level on registration of deaths 8 districts are the only districts recording more than 90 per cent of registered births as well as deaths.

Crude Birth and Death Rate

The crude birth rates and crude death rates based on these registered events for the years 2001–2008 are presented in Table-4 and Table-5 respectively. Statement 6 shows the comparative picture of birth rates and death rates based on the data from CRS and SRS during the years 1981-2008.

**Statement -6: Crude Birth and Crude Death Rates Based on CRS and SRS
And Level of Registration of Births and Deaths - 1981 - 2008**

Year	CBR		Level Of Registration of Births	CDR		Level Of Registration of Deaths
	SRS	CRS		SRS	CRS	
1981	28.3	12.6	45.0	9.1	4.1	45.2
1982	27.9	12.7	45.9	9.2	4.0	43.5
1983	29.1	10.5	36.5	9.3	3.2	62.9
1984	30.3	11.1	37.1	9.6	3.4	35.3
1985	29.6	12.0	40.9	8.8	3.8	43.8
1986	29.0	13.7	47.7	8.7	3.9	45.8
1987	28.9	13.4	46.9	8.5	3.7	43.6
1988	28.7	15.0	52.8	8.8	4.6	52.5
1989	28.0	17.7	57.4	8.8	5.1	52.6
1990	28.0	17.6	63.6	8.1	4.7	59.1
1991	26.9	17.7	66.1	9.0	5.4	59.9
1992	26.3	18.0	69.5	8.5	4.7	56.1
1993	25.5	18.3	73.4	8.0	5.5	69.9
1994	25.0	21.6	75.4	8.3	6.9	72.3
1995	24.1	20.3	86.3	7.6	6.6	89.4
1996	23.0	20.5	91.6	7.6	6.6	90.8
1997	22.7	20.2	91.7	7.6	6.9	93.0
1998	22.0	20.0	94.2	7.9	7.2	94.3
1999	22.3	18.7	87.8	7.7	6.5	88.3
2000	22.0	20.0	88.9	7.8	7.0	87.4
2001	22.2	19.5	86.3	7.6	7.0	90.5
2002	22.1	18.9	81.9	7.2	6.9	91.8
2003	21.8	19.3	84.3	7.2	6.9	91.7
2004	20.9	18.8	85.8	6.9	6.5	90.3
2005	20.6	18.5	87.6	7.1	6.7	91.9
2006	20.1	19.0	92.2	7.1	7.0	96.7
2007	19.9	19.0	92.0	7.3	6.9	91.6
2008	19.8	19.3	94.6	7.4	6.6	87.0

It is seen from the Statement 6 that the birth rate and death rate for the state as a whole based on CRS data is not comparable with the rates based on SRS data.

Infant Mortality Rate (IMR)

The Infant Mortality Rate is defined as the number of infant deaths (deaths below the age of one year) per thousand births. A complete CRS is the only source to yield number of infant deaths at all administrative levels including Districts / Sub-districts. SRS is another source for providing number of infant deaths, is not designed to give reliable estimates below the State level. Table-3 shows that the number of registered infant deaths in 2001 was 7821 and it was 12875 in 2008. The infant mortality rates based on the data from CRS for the years 2001-2008 are presented in Table-6.

The level of registration of infant deaths, calculated as the ratio (in percentage) of CRS based Infant Mortality Rate to SRS based IMR for the state for the period 2001-08 is shown in Statement-7. This statement captures the proportion of estimated infant deaths that are being registered at the state level during the period under review. Large variations are seen while comparing the CRS based IMR to that of SRS based IMR. In the State, proportion of the registered infant deaths is below 30 percent for all the years under review. Such a low level of registration of infant deaths is a serious cause of concern. Full coverage of infant deaths by the Civil Registration machinery only can help in identifying areas with high infant mortality rates, which is an essential input for any health planning.

Statement – 7 : Infant Mortality Rates (IMR) based on CRS as percentage of that from SRS, 2001-2008

Year	Percentage of CRS rates to SRS rates
2001	13
2002	18
2003	19
2004	20
2005	18
2006	23
2007	23
2008	29

Note: Complete and reliable information is not available.

Sex Ratio at Birth [SRB]

The Sex Ratio at birth is an important indicator to map the sex differential of the population at the beginning of their life. The sex ratio at birth has been calculated for different districts for the period 2001-2008 and shown in Statement 8.

Statement- 8: Sex-ratio at Birth on Registered Births, 2001-2008

Sl. No	Karnataka/District	2001	2002	2003	2004	2005	2006	2007	2008

29	Uttara Kannada	985	904	953	899	898	956	896	949

The Sex Ratio at birth for the state ranges from 858 to 1047 for the period under review. In 2001 [Bangalore (1138), D.Kannada (1003), Hassan (1044) and Mysore & Udupi (1004)], in 2002, (Chamarajanagar (1077), Davanagere (1020), Gadag (1025) & Shimoga (1019)], in 2003 [Chitradurga (1010)], in 2005 [Chamarajanagar (1072), Gadag (1053), Kodagu (1001), Shimoga (1024) and Udupi (1007)] and in 2006 [Bidar (1005) and Gadag (1026)], high sex ratio at birth have been witnessed except 2004, wherein it was below 1000. However during 2007 and 2008 at the state level for both the years and at the district level in 2007 (12 districts) and in 2008(16 districts) have recorded higher sex ratio at birth. Since 2006, the sex ratio at birth over 1000 in some of the districts of the State is due to introduction of Bhagyalakshmi Scheme. The situation is quite alarming in those districts where the sex ratio at birth is over 1000.
