PREFACE

Industry is one of the important sector for the development of State's Economy. The information on industry is essential for formulating industrial policies and programmes. This sector accounts for development of SDP and play a vital role.

Annual Survey of industries (ASI) is the main source of industrial statistics in India. The survey pertains to registered sector of industries and is conducted in all the States under the statutory provision of the collection of statistics Act, 2008 and the collection of statistical Rules 2011. The principal objective of statistical survey and enquiries on industry is to provide effective tools to planners and policy makers to measure the performance of industry. It also provides statistical information to assess objectively, the changes in the growth of manufacturing sector.

The review of ASI 2010-2011 in Karnataka throws light on salient features of the industry related activities, such as the data on principal characteristics, the capital structure, district level performance, employment details etc.

The Field Operation Division of the National Sample Survey Office carries out the field work for data collection from industrial units covered for the purpose of the survey. From 2010-11 onwards DES Karnataka has taken up field work from industrial units of Residual Samples. DES, Karnataka has taken up data processing, validation, tabulation of data collected in the Residual Samples were done in accordance with the guideline of Central Statistical Office, Kolkata. The ASI report is based on the Pooled data from Units surveyed by DES & Unit Level Data supplied by Central Statistical Office (IS wing), Kolkata for the Central Samples.

Under the guidelines of Sri.U.R.Subramanya, A.R.Ravi, K.Siddaraju Joint Directors, DES & S/Sri.P.V.Raghavendra and N.S.SatishAsst.Directors (Retd-NSSO) Consultants for ASI Residual Survey, this report has been prepared.

ANNUAL SURVEY OF INDUSTRIES 2010-11
REPORT ON CENTRAL AND STATE
POOLED ESTIMATES

1.1 Introduction

Industrial Sector plays a pivotal role in the rapid and balanced economic development of the country as well as the State. The statistical data bases on various aspects of this important sector of the economy are the key factor for analyzing the course of development.

The Annual Survey of Industries (ASI) is the principal source for industrial statistics. It provides statistical information to assess and evaluate, objectively and realistically, the changes in growth, composition and structure of organised manufacturing sectors comprising of activities related to manufacturing processes, repair services, gas, water supply and cold storage. Viewed in this context, the collection and dissemination of ASI data on a regular basis, are of vital source of information for industrial policy makers, planners and researchers. The Survey is conducted annually under the statutory provisions of the Collection of Statistics Act 2008, and the Rules framed in 2011.

The National Sample Survey Office (NSSO), (FOD) is the Statistical authority appointed under this act for the purpose of Collection of these statistics. From the year 2010-11, Govt. of Karnataka has started collection of ASI data in the Residual Samples which are selected by CSO, Kolkata. . Hence this report of ASI pertaining to the year 2010-11 is based on the data obtained from **Pooling** the data collected from Govt. of Karnataka and data obtained by Central Statistical Office (Industrial Statistics Wing), Government of India. The report presents a comparative study of the estimates of the principal characteristics and its percentage distribution for the state/district levels.

This is first of its kind of Pooling Estimates in Karnataka which is being prepared and published now.

1.2 Objective of the Survey :

The ASI is carried out by Field Operation Division (FOD) of National Sample Survey Office (NSSO), Government of India through its network of Zonal/Regional/Sub-Regional offices designed to obtain comprehensive and detailed data for the following objectives :

- (a) Estimation of the contribution of manufacturing industries as a whole and of each type of industry to the “National Income/State Income.”
- (b) Systematic study of the structural aspects of the industry.
- (c) Occasional analysis of the various factors influencing industries in the State/Country.

(d) Construction of comprehensive, factual and systematic bases for formulation of policy.

The survey of ASI is also carried out from 2010-11 by Govt. of Karnataka through the Residual Samples selected by CSO, Kolkata from the staff of District Statistical Offices spread over all districts of Karnataka.

1.3 Scope and Coverage:

The coverage of the Survey extends to the entire factory sector comprising industrial units (called factories) registered under the section 2m(i) and 2m(ii) of the Factories Act, 1948 i.e. those factories employing 10 or more workers using power and those employing 20 or more workers without using power.

In addition to section 2(m)(i) & 2(m)(ii) of the Factories Act 1948, electricity units registered with the Central Electricity Authority and Bidi & Cigar units, employing 10 or more workers with the aid of power and 20 or more workers without the aid of power, registered under the Bidi & Cigar Workers (Conditions of Employment) Act, 1966 are also covered in ASI.

Although the scope of the ASI was extended to all registered manufacturing establishments in the State, establishments under the control of the Defence Ministry, oil storage and distribution units, restaurants and cafes and technical training institutions not producing anything for sale or exchange were kept outside the coverage of the ASI.

1.4 Unit of Enumeration

The primary unit of enumeration in the survey is a factory in the case of manufacturing industries, a workshop in the case of repair services, an undertaking or a license in the case of electricity, gas and water supply undertakings and an establishment in the case of Bidi and cigar industries. The owner of two or more establishments located in the same state and pertaining to the same industry group and belonging to same scheme (censusor sample) only is, however, permitted to furnish a single consolidated return, termed as 'Joint Return'. Such consolidated returns are a common feature in the case of Bidi and cigarestablishments, electricity and certain private and public sector undertakings.

1.5 ASI Frame

The ASI frame is based on the list of registered factory/units maintained by the Director, Directorate of Factories and Boilers in the state and those maintained by registration authorities in respect of Bidi and cigar establishments and electricity undertakings. The frame is being revised and updated periodically by the regional offices of the Field Operations Division of NSSO in consultation with the Director, Directorate of Factories and Boilers in the State. At the time of revision, the names of the de-registered factories are removed from the ASI frame and those of the newly registered factories are

added. During updating only new registrations are added to the existing frame. In spite of regular updating of the frame, quite a number of small-sized factories selected for the survey are found to be non-existing in the field and are termed as deleted factories. However, such factories are not taken into consideration for the purpose of tabulation and analysis in this report. All electricity undertakings other than captive units as well as departmental undertakings such as Railway workshops etc. have been kept outside the preview of ASI from 1999-2000.

1.6 Reference Period

Reference period for ASI 2010-11 was the accounting year of factory, ending on any day during the fiscal year 2010-11. Thus in ASI 2010-11, data collected from respective establishments relate to their accounting year ended on any day between 1st April 2010 & 31st March 2011. Survey was conducted in the year 2010-11 (October 2010 to March 2011) by Central Agency i.e by NSSO and work in respect of Residual Samples was taken up by during 2012-13 in the districts of Karnataka.

1.7 Classification of Industries

The NIC-2008 was introduced from ASI 2009-10, it classifies all the factories in the ASI frame in their appropriate industry groups on the basis of the principal product manufactured. The estimates for different aggregates presented in this report at two or three digit level of industry, correspond to the NIC-2008.

1.8 Sampling Design & Sample Allocation:

Sampling Design: The sampling design adopted in ASI has undergone considerable changes from time to time, taking into account the technical and other requirements. The revised sampling design has been adopted from ASI 2010-11.

- a) **Census Sector:** Census Sector is defined as follows: All industrial units belonging to the six less industrially developed states/ UT's viz. Manipur, Meghalaya, Nagaland, Tripura, Sikkim and Andaman & Nicobar Islands; b) For the rest of the twenty-nine states/ UT's., (i) units having 100 or more employees, and (ii) all factories covered under Joint Returns.
- b) After excluding the Census Sector units as defined above, all units belonging to the strata (District × 4-digit of NIC-08) having less than or equal to 4 units are also considered as Census Sector units.
- c) **Sample Sector units:** Remaining units, excluding those of Census Sector, called the sample sector, are arranged in order of their number of employees and samples are then drawn circular systematically considering sampling fraction, say 20%, within each stratum (District X Sector X 4-digit NIC) in the form of 4 independent subsamples. This will be done for each district and thus, for each

State/UT. An even number of units with minimum of 4 are selected from each stratum and evenly distributed in four subsamples.

- d) **Allocation of Samples:** All the units belonging to the Census Sector together with selected units of 2 sub-samples, say, of sub-samples 1 and 3 will form the central sample and information for these units will be collected and processed by the Central Agency (i.e., NSSO and CSO(ISW)). After selecting the central sample in the way mentioned above, the units selected for the remaining 2 sub-samples, say, of sub-samples 2 and 4 will be allocated for each State/UT separately.

Validated state-wise unit-level data of the central sample will also be sent to the states for pooling this data with their surveyed data to get a combined estimate at the district level.

1.9 Presentation of Data :

The Pooled estimated results presented in this report are related to reported factories of both Census and sample sector of Central Agency and including data collected by residual samples of State for Annual Survey of Industries of 2010-11.

The tables describe several important Industrial characteristics such as changes in Fixed Capital, Working Capital, Invested Capital, Number of Employees, Workers and Emoluments paid to them, Value of output, Value of input and Net Value Added etc. Besides, a comparative analysis has been done in the report to show the trend of Industrial growth in the State and at District level. The value are generally rounded off to Rupeeslakh, hence the total of all industry figures may not tally with the sum of individual industry figures.

2. CONCEPTS AND DEFINITIONS

A number of accounting, economic and other terms related to the factories are used in conduct of Annual Survey of Industries. For proper assessment and interpretation of ASI data, those are given below:

2.1 REFERENCE YEAR It corresponds to the financial year. For example, for ASI 2010-11 the reference period is the financial year commencing from 1st April 2010 and ending on 31st March 2011 or the accounting year of the factory ending on any date between 1.4.10 to 31.3.11.

2.2 FACTORY Factory is one, which is registered under Sections 2m(i) and 2m(ii) of the Factories Act, 1948. The Sections 2m(i) and 2m(ii) refer to any premises including the precinct thereof (i) wherein ten or more workers are working, or were working on any day of the preceding twelve months, and in any part of which a manufacturing process is being carried on with the aid of power, or is ordinarily so carried on, or (ii) wherein twenty or more workers are working, or were working on any day of the preceding twelve months and in any part of which a manufacturing process is being carried on without the aid of power, or is ordinarily so carried on. Closed factories with fixed assets on site are also considered as registered factories till they are deregistered and removed from the live-register maintained by Director, Directorate of Factories & Boilers in the State.

2.3 FIXED CAPITAL Fixed Capital represents the depreciated value of fixed assets owned by the factory as on the closing day of the accounting year. Fixed assets are those, which have normal productive life of more than one year. Fixed capital covers all types of assets, new or used or own constructed, deployed for productions, transportation, living or recreational facilities, hospitals, schools, etc. for factory personnel. It would include land, building, plant and machinery, transport equipment etc. It includes the fixed assets of the head office allocable to the factory and also the full value of assets taken on hire-purchase basis (Whether fully paid or not) excluding interest element. It excludes intangible assets and assets solely used for post-manufacturing activities such as, sale, storage, distribution, etc.

2.4 PHYSICAL WORKING CAPITAL This is defined to include all physical inventories owned, held or controlled by the factory as on the closing day of the accounting year such as the materials, fuels and lubricants, stores, etc. that enter into products manufactured by the factory itself or supplied by the factory to others for processing. Physical working capital also includes the value of stock of materials, fuels and stores etc. purchased expressly for re-sale, semi-finished goods and goods-in-process on account of others and goods made by the factory which are ready for sale at the end of the accounting year. However, it does not include the stock of the materials, fuels, stores, etc. supplied by others to the factory for processing. Finished goods processed by others from raw materials supplied by the factory and held by them are included and finished goods processed by the factory from raw materials supplied by others, are excluded.

2.5 WORKING CAPITAL is the sum total of the physical working capital as already defined above and the cash deposits in hand and at bank and the net balance receivable over amounts payable at the end of the accounting year. Working capital, however, excludes unused overdraft facility, fixed deposits irrespective of duration, advances for acquisition of fixed assets, loans and advances by proprietors and partners irrespective of their purpose and duration, long-term loans including interest thereon and investment.

2.6 PRODUCTIVE CAPITAL is the total of fixed capital and working capital as defined above.

2.7 INVESTED CAPITAL is the total of fixed capital and physical working capital as defined above.

2.8 GROSS VALUE OF PLANT OF MACHINERY represents the total original (un depreciated) value of installed plant and machinery at the end of the accounting year. It includes, the book value of the newly installed plants and machinery and the approximate value of rented in plants and machinery at the time of renting-in but exclude the value of rented-out plants and machinery. Total value of all the plants and machinery acquired on hire-purchase basis is also included.

2.9 OUTSTANDING LOANS represent all loans whether short term or long term, whether interest bearing or not, outstanding according to the books of the factory as on the closing day of the accounting year.

2.10 RENT PAID represents the amount of royalty paid in the nature of rent for the use of the fixed assets in the factory.

2.11 INTEREST PAID includes all interest paid on factory account on loan, whether short term or long term, irrespective of the duration and the nature of agency from which the loan was taken. Interest paid to partners and proprietors on capital or loan are excluded.

2.12 WORKERS are defined to include all persons employed directly or through any agency whether for wages or not and engaged in any manufacturing process or in cleaning any part of the machinery or premises used for manufacturing process or in any other kind of work incidental to or connected with the manufacturing process or the subject of the manufacturing process. Labour engaged, in the repair and maintenance or production of fixed assets for factory's own use or labour employed for generating electricity or producing coal, gas etc. are included.

2.13 EMPLOYEES include all workers defined above and persons receiving wages and holding supervisory or managerial positions engaged in administrative office, store keeping section and welfare section, sales department as also those engaged in purchase of raw materials etc. or purchase of fixed assets for the factory and watch and ward staff.

2.14. TOTAL PERSONS ENGAGED include the employees as defined above and all working proprietors and their family members who are actively engaged in the work of the factory even without any pay and the unpaid members of the co-operative societies who worked in or for the factory in any direct and productive capacity. The number of workers or employees is an average number obtained by dividing mandays worked by the number of days the factory had worked during the reference year.

2.15 MANDAYS represents the total number of days worked and the number of days paid for during the accounting year. It is obtained by summing-up the number of persons of specified categories attending in each shift over all shifts worked on all days.

2.16 WAGES AND SALARIES are defined to include all remuneration in monetary terms and also payable more or less regularly in each pay period to workers as compensation for work done during the accounting year. It includes (a) direct wages and salary (i.e., basic wages/salaries, payment of overtime, dearness, compensatory, house rent and other allowances); (b) remuneration for the period not worked (i.e., basic wages, salaries and allowances payable for leave period, paid holiday, lay-off payments and compensation for unemployment, if not paid from sources other than employers); (c) bonus and ex-gratia payment paid both at regular and less frequent intervals (i.e. incentive bonus, productive bonus profit sharing bonus festival or year-end bonus etc.). It excludes layoff payments which are made from trust other special funds set up exclusively for this purpose i.e., payments not made by the employer. It also excludes imputed value of benefits in kind, employer's contribution to old age benefits and other social security charges, direct expenditure on maternity benefits crèches and other group benefits. Traveling and other expenditure incurred for business purposes and reimbursed by the employee are excluded. The wages are expressed in term of gross value i.e., before deduction for fines, damages, taxes, provident fund, employee's state insurance contribution etc.

2.17 CONTRIBUTION TO PROVIDENT FUND AND OTHER FUNDS include old age benefits like provident fund, pension, gratuity etc. and employers contribution towards other social security charges such as employees state insurance, compensation for work injuries and occupational diseases, provident fund-linked insurance, retrenchment and lay off benefits.

2.18 WORKMEN AND STAFF WELFARE EXPENSES include group benefits like direct expenditure on maternity, crèches, canteen facilities, educational, cultural recreational facilities; and grants to trade unions, co-operative stores etc. meant for employees.

2.19 TOTAL EMOLUMENTS is defined as the sum of wages and salaries, employer's contribution as provident fund and other funds and workmen and staff welfare expenses as defined above.

2.20 FUEL CONSUMED represents total purchase value of all items of fuels' such as coal, liquefied petroleum gas, petrol, diesel, electricity, lubricants, water etc. consumed by the factory during the accounting year but excluding the items which directly enter into the manufacturing process

2.21 MATERIALS CONSUMED represent the total delivered value of all items of raw materials, components, chemicals, packing materials and stores, which actually enter into the production process of the factory during the accounting year. It also includes the cost of all materials used for the construction of building etc. for the factory's own use. It however, excludes all intermediate products consumed during the accounting year. Intermediate products are those products, which are produced by the factory but are subject to further manufacturing.

2.22 EX-FACTORY VALUE of all products and by-products manufactured is attained at the rate of net sale-value (inclusive of subsidies etc.) with respect to each of the items.

2.23 TOTAL INPUTT his comprises gross value of fuel materials etc. consumed (as definedabove) and also other inputs viz. (a) cost of non-industrial services received from others(b) cost of materials consumed for repair and maintenance of factory's fixed assetsincluding cost of work done by others to the factory's fixed assets (c) cost of contract andcommission work done by others on materials supplied by the factory (d) cost of officesupplies and products reported for sale during last year & used for further manufactureduring the accounting year.

2.24 TOTAL OUTPUT Gross output is defined to include the ex-factory value, (i.e., exclusiveof taxes, duties, etc. on sale and inclusive of subsidies etc., if any) of products and byproductsmanufactured during the accounting year, and the net value of the semi-finishedgoods, work-in-process, (represents the excess/deficit of value of semi-finished goods orwork-in-process at the end of the accounting year over that of the beginning of the yearplus net balance of semi-finished fixed assets on factory's capital account) and also thereceipts for industrial and non-industrial services rendered to others, value of semi finishedgoods of last year sold in the current year, sale value of goods sold in the samecondition as purchased and value of electricity generated and sold. Value of gross outputand total output has been used in the text inter-changeable to mean the same thing.

2.25 DEPRECIATION is consumption of fixed capital due to wear and tear and obsolescence during the accounting year and is taken as provided by the factory owner or is estimated on the basis of cost of installation and working life of the fixed assets.

2.26 NET VALUE ADDED This is the increment to the value of goods and services that iscontributed by the factory and is obtained by deducting the value of total inputs anddepreciationfrom gross value of output.

2.27 COMPONENTS AND ACCESSORIES CONSUMED are the portion of materials consumed and shown separately to represent as a special type of consumption.

2.28 IMPORTED MATERIALS CONSUMED ON ACTUAL USE comprise the portion of materials consumed and which are imported from other countries. It may be raw materials or fuels or components and accessories of the input basket.

2.29 SEMI-FINISHED GOODS refer to the imputed value of all materials which have been partially processed by the factory but which are not usually sold without further processing. It includes the work in progress for materials supplied by others, but excludes the value of semi-finished fixed assets produced for factory's own use.

2.30 FINISHED GOODS of the factory are the ultimate products read for sale. It does not require further processing but includes packaging and labeling etc.

REPORTED SALIENT FEATURES ON POOLING ESTIMATES PERTAINING TO CENTRAL AND STATE DATA OF ASI 2010-11

Some of the salient features reported as follows:

- The State and Central sample results broadly satisfy almost all the pre requisites for pooling , viz., use of same layout, validation rules for data processing and timely availability of data. Comparison of principle characteristics between Central alone data and pooled data is given in Statement 1 to 4.
- Status of unit code given in the item 12 of ASI schedule is a very important figure for ASI tabulation as the multipliers are calculated on the basis of these figures.
- It may be seen from the table that a significant percentage of state samples were found deleted. This may be due to the fact that status of a sample sector factory, unless selected for survey, is not updated at the time of dynamic updation of the ASI frame, and hence remains in the frame as a live factory, making it eligible for selection. Another important feature of the state sample is high percentage of casualty (with status of unit code 7,8,9,10) in comparison to the central sample. Considering the total size of the state of the sample, this number is quite high and affects the quality of the estimates.
- The multipliers are calculated on the basis of status of units recorded in the item 12 of Block A of the schedule.
- The state and central sample results broadly satisfy almost all the pre-requisites for pooling viz. use of same layout and validation rules for data processing, timely availability of state and central data. However, there is sample scope of improvement in the quality of processing of the state sample (even the central sample, so to say). Also it seems that both the estimates are not very widely divergent, indicating thereby that both sets are close to the true population parameters. But, pooled estimates is the only option to generate estimates at district level.

Concluding Remarks

The study shows that if the state sample is surveyed and processed concurrently with the central sample maintain a uniform standard of data validation and data processing using the same layout, tabulation strategy and sets of data validation rules, pooling of state and central is possible. Moreover, if the estimates are reasonably close and the variance estimates are also close, such a pooling would results in a better estimates at state level. Most importantly, with the help of a pooled sample one can generate estimates at district level which can be used for estimates of District Domestic Product and for micro-level planning. Moreover, care should be taken to reduce the non-response in the state sample to the maximum extent possible. The ASI state data of Karnataka can be further improved by

making some more probing and referring the data back to the field, if required. High incidence of deletion cases in the state sample probably points out to the dynamic updation of ASI frame using the state sample (surveyed cases) too in addition to the central sample, as is the practice now. Also, noting the small samples from a few districts, it is recommended to increase the size of the state sample, so as to ensure a better representation in terms of units selected for survey and consequent better control over the variability of the estimates.
